

## **DTE Energy's Northern California biomass plant begins operations**

Mar 13, 2014

STOCKTON, Calif., March 13, 2014 /[PRNewswire](#)/ -- DTE Energy Services, Inc. (DTEES) has finished its construction project to convert a shuttered coal-fired power plant at the Port of Stockton to operate on biomass fuel.

The plant, known as Stockton Biomass, began commercial operations on Feb. 21. It is selling its renewable power to PG&E Company to help it meet its renewable energy requirement.

The plant will use about 320,000 tons of woody biomass fuel annually to generate about 45 megawatts of power – enough electricity to meet the needs of 45,000 homes. The fuel primarily is derived from urban wood waste, tree trimmings and agricultural processes.

"We are excited to have this green energy plant operational and appreciate the support we've received from the Port of Stockton, local officials and community leaders to make it a reality," said Steve Sorrentino, Vice President Wholesale Power & Renewables, DTEES. "We recognize the positive economic impact of this facility on the community and look forward to partnering with the city of Stockton for many years to come."

The site, once one of the most polluted in San Joaquin Valley, now is home to one of the cleanest solid-fuel power plants in the country. It is providing 35 high-quality jobs and another 100 indirectly involved with DTE Stockton's fuel supply infrastructure.

The plant began operation in 1989 as a coal-fired power plant and ceased operation in April 2009. DTEES purchased it in June 2010 with plans to convert the plant to biomass. At its peak, the construction project employed about 100 workers. DTEES replaced the boilers and employed the best available control technologies to minimize air emissions.

DTEES, a subsidiary of DTE Energy, is headquartered in Ann Arbor, Mich. It has completed similar biomass conversions in Cassville, Wis. and Bakersfield, Calif. The company also operates biomass power plants in Woodland, Calif. and Mobile, Ala. An official ribbon-cutting for the Stockton plant will be held later this spring.

### **About DTE Energy**

DTE Energy (NYSE: DTE) is a Detroit-based diversified energy company involved in the development and management of energy-related businesses and services nationwide. Its operating units include an electric utility serving 2.1 million customers in Southeastern Michigan and a natural gas utility serving 1.2 million customers in Michigan. The DTE Energy portfolio also includes non-utility energy businesses focused on power and industrial projects and energy trading.
